

IEEE Global Communications Conference

7-11 December 2021 • Madrid, Spain

Connecting Cultures around the Globe

NEXT-GENERATION NETWORKING AND INTERNET SYMPOSIUM

SYMPOSIUM CO-CHAIRS

Zuqing Zhu, University of Science and Technology of China, China, zqzhu@ieee.org

Alessio Giorgetti, National Research Council of Italy, Italy, alessio.giorgetti@ieiit.cnr.it

Ilhem Fajjari, Orange Labs Networks, France, ilhem.fajjari@orange.com

SCOPE AND MOTIVATION

There have been unprecedented advances in developing technologies to enable the next generation networks, which will seamlessly integrate the computing equipment with networking to provide the computing-harvesting next generation services. Thanks to the huge enhancement of computing processor and interface architectures, communication networks can now handle network functions implemented as virtualized machines making large use of software elements. Communication devices can now host very advanced applications, and data centers can be pervasively distributed down to network access points. Networks, applications and clouds control layers can so leverage on advanced decision-making solutions to target full automation in Internet and next-generation service delivery. In addition, quantum Internet is emerging with vast amount of computing power, which opens new possibilities. This trend also greatly affects next-generation broadband wireless networks, such as spectrum efficiency, energy efficiency, and mobility management. The NGNI symposium welcomes original research work in technical areas focusing on the innovations on next-generation networks.

TOPICS OF INTEREST

The Next-Generation Networking and Internet (NGNI) Symposium seeks original contributions in the following topical areas, plus others that are not explicitly listed but are closely related to:

- Addressing and naming with the presence of mobility and portability
- Artificial intelligence in next-generation networks
- Centralized-RAN, Cloud-RAN, and Fog-RAN architectures
- Cloud-based, edge-based and fog-based networking
- Content-centric networking and named data network
- Converged networks and applications
- Emerging added-value network services and applications
- Data center network architectures and performance

- **Disaggregated optical transport networks: architecture, control and management**
- **Free Space and deep space networks**
- **Cloud-native networking architectures**
- **Future Internet and next-generation networking architectures**
- **Energy-efficient green communications**
- **Heterogeneous multi-layer and multi-domain wireless-wireline internetworking**
- **High speed and parallel processing architectures for next generation routers and switches**
- **Network Automation, Intent-based and policy-based network control and management**
- **Internet economics, pricing, accounting, and growth modelling**
- **Internet of Things (IoT), M2M, D2D, MTC**
- **Internet survivability and network resilience strategies**
- **Integrated networking, storage and computing**
- **Mobile Cloud Computing (MCC) and Mobile Edge Computing (MEC)**
- **Mobile security: device, application, and data**
- **Networking flying vehicles such as UAVs and drones**
- **Next-generation access networks**
- **Next-generation anomaly, intrusion, and attack detection/prevention**
- **Next-generation flow management: resource sharing, congestion control**
- **Next-generation Internet applications and service**
- **Next-generation networking protocols**
- **Next-generation network management and control**
- **Open communities, open API, open source**
- **Operational and research issues with IPv6**
- **Overlay and peer-to-peer (P2P) networking**
- **Packet classification and forwarding mechanisms at ultra-high link rates (terabits)**
- **Quality of Service (QoS) and Quality of Experience (QoE) in next-generation networks**
- **Quantum Internet**
- **Resource orchestration in next-generation networks**
- **Routing and switching**
- **Self-protection and self-organization networking**
- **Software defined networking (SDN) and network function virtualization (NFV)**
- **Software defined radio (SDR) and cognitive radio networks**
- **Terahertz wireless communications**

- **Traffic measurement, analysis, modelling, visualization, and engineering**
- **Vehicular networking (IoV/V2V/V2I/V2X)**

IMPORTANT DATES

Deadline for paper submission: 15 April 2021

Date for notification: 25 July 2021

Deadline for final paper submission: 1 September 2021

SUBMISSION INSTRUCTIONS

All papers for technical symposia should be submitted via [EDAS](#). Full instructions on how to submit papers are provided on the IEEE GLOBECOM 2021 website:

<https://edas.info/newPaper.php?c=27488&track=102690>
